

# **The Battle of the Neighbourhoods – Report**

## **1. Introduction & Business Problem:**

### **Problem Background:**

The City of New York, is the most populous city inside the United States. It is diverse and is the monetary capital of USA. It is multicultural. It affords lot of enterprise opportunities and business friendly environment. It has attracted many special gamers into the marketplace. It is a global hub of business and commerce. The metropolis is a main middle for banking and finance, retailing, global trade, transportation, tourism, actual estate, new media, traditional media, advertising, legal services, accountancy, insurance, theatre, fashion, and the arts in the United States.

This also way that the marketplace is relatively competitive. As it's miles especially developed city so cost of doing commercial enterprise is additionally one of the highest. Thus, any new business challenge or growth needs to be analyzed carefully. The insights derived from evaluation will provide good understanding of the business environment which assist in strategically targeting the marketplace. This will assist in reduction of risk. And the Return on Investment might be reasonable.

### **Problem Description:**

A restaurant is a business which prepares and serves food and drink to customers in return for money, either paid before the meal, after the meal, or with an open account. The City of New York is famous for its excellent cuisine. The food culture includes an array of international cuisines influenced by the city's immigrant history.

1. Central and Eastern European immigrants, especially Jewish immigrants - bagels, cheesecake, hot dogs, knishes, and delicatessens
2. Italian immigrants - New York-style pizza and Italian cuisine
3. Jewish immigrants and Irish immigrants - pastrami and corned beef
4. Chinese and other Asian restaurants, sandwich joints, trattorias, diners, and coffeehouses are ubiquitous throughout the city
5. mobile food vendors - Some 4,000 licensed by the city
6. Middle Eastern foods such as falafel and kebabs examples of modern New York street food
7. It is famous for not just Pizzerias, Cafe's but also for fine dining Michelin starred restaurants. The city is home to "nearly one thousand of the finest and most diverse haute cuisine restaurants in the world", according to Michelin.

So it is evident that to survive in such competitive market it is very important to strategically plan. Various factors need to be studied in order to decide on the Location such as:

1. New York Population
2. New York City Demographics
3. Are there any Farmers Markets, Wholesale markets etc nearby so that the ingredients can be purchased fresh to maintain quality and cost?
4. Are there any venues like Gyms, Entertainment zones, Parks etc nearby where floating population is high etc.
5. Who are the competitors in that location?
6. Cuisine served / Menu of the competitors
7. Segmentation of the Borough
8. Untapped markets
9. Saturated markets etc The list can go on...

Even though well funded XYZ Company Ltd. need to choose the correct location to start its first venture. If this is successful they can replicate the same in other locations. First move is very important, thereby choice of location is very important.

### **Target Audience:**

To recommend the correct location, XYZ Company Ltd has appointed me to lead of the Data Science team. The objective is to locate and recommend to the management which neighbourhood of New York city will be best choice to start a restaurant. The Management also expects to understand the rationale of the recommendations made.

This would interest anyone who wants to start a new restaurant in New York city.

### **Success Criteria:**

The success criteria of the project will be a good recommendation of borough/Neighbourhood choice to XYZ Company Ltd based on Lack of such restaurants in that location and nearest suppliers of ingredients.

## **2. Data :**

One city will be analysed in this project : *New York City*.

We will be using the below datasets for analysing New York city

**Data 1 :** Neighbourhood has a total of 5 boroughs and 306 Neighbourhood. In order to segment the Neighbourhoods and explore them, we will essentially need a dataset that contains the 5 boroughs and the Neighbourhoods that exist in each borough as well as the the latitude and logitude coordinates of each Neighbourhood.

This dataset exists for free on the web. Link to the dataset is :

[https://geo.nyu.edu/catalog/nyu\\_2451\\_34572](https://geo.nyu.edu/catalog/nyu_2451_34572)

	Borough	Neighborhood	Latitude	Longitude
0	Bronx	Wakefield	40.894705	-73.847201
1	Bronx	Co-op City	40.874294	-73.829939
2	Bronx	Eastchester	40.887556	-73.827806
3	Bronx	Fieldston	40.895437	-73.905643
4	Bronx	Riverdale	40.890834	-73.912585

**Data 2 :** Second data which will be used is the DOHMH Farmers Markets and Food Boxes dataset. In this we will be using the data of Farmers Markets.

<https://data.cityofNew York.us/dataset/DOHMH-Farmers-Markets-and-Food-Boxes/8vbk-6iz2>

Website-<https://www.grownyc.org/greenmarketco/foodbox>

GrowNYC's Fresh **Food Box** Program is a food access initiative that enables under-served communities to purchase fresh, healthy, and primarily regionally grown produce well below traditional retail prices.

A *farmers' market* is often defined as a public site used by two or more local or regional producers for the direct sale of farm products to consumers. In addition to fresh fruits and vegetables, markets may sell dairy products, fish, meat, baked goods, and other minimally processed foods.

	FacilityName	Service Category	Service_Type	Address	Address_2	Borough	ZipCode	Latitude	Longitude	AdditionalInfo	StartDate	EndDate	Monday	Tuesday	Wednesday	Thursday

**Data 3 :** For the below analysis we will get data from wikipedia as given below :

1. New York Population
2. New York City Demographics
3. Cuisine of New York city

[https://en.wikipedia.org/wiki/New\\_York\\_City](https://en.wikipedia.org/wiki/New_York_City)  
[https://en.wikipedia.org/wiki/Economy\\_of\\_New\\_York\\_City](https://en.wikipedia.org/wiki/Economy_of_New_York_City)  
[https://en.wikipedia.org/wiki/Portal:New\\_York\\_City](https://en.wikipedia.org/wiki/Portal:New_York_City)  
[https://en.wikipedia.org/wiki/Cuisine\\_of\\_New\\_York\\_City](https://en.wikipedia.org/wiki/Cuisine_of_New_York_City)

**Data 4 :** New York city geographical coordinates data will be utilized as input for the Foursquare API, that will be leveraged to provision venues information for each Neighbourhood. We will use the Foursquare API to explore Neighbourhoods in New York City. The below is image of the Foursquare API data.

	Neighborhood	NeighborhoodLatitude	NeighborhoodLongitude	Venue	VenueLatitude	VenueLongitude	VenueCategory
0	Marble Hill	40.876551	-73.91066	Arturo's	40.874412	-73.910271	Pizza Place
1	Marble Hill	40.876551	-73.91066	Bikram Yoga	40.876844	-73.906204	Yoga Studio
2	Marble Hill	40.876551	-73.91066	Tibbett Diner	40.880404	-73.908937	Diner
3	Marble Hill	40.876551	-73.91066	Sam's Pizza	40.879435	-73.905859	Pizza Place
4	Marble Hill	40.876551	-73.91066	Loeser's Delicatessen	40.879242	-73.905471	Sandwich Place

### 3.Methodology :

#### Business Understanding :

Our main goal is to get optimum location for new restaurant business in New York City for XYZ Company.

#### Analytic Approach :

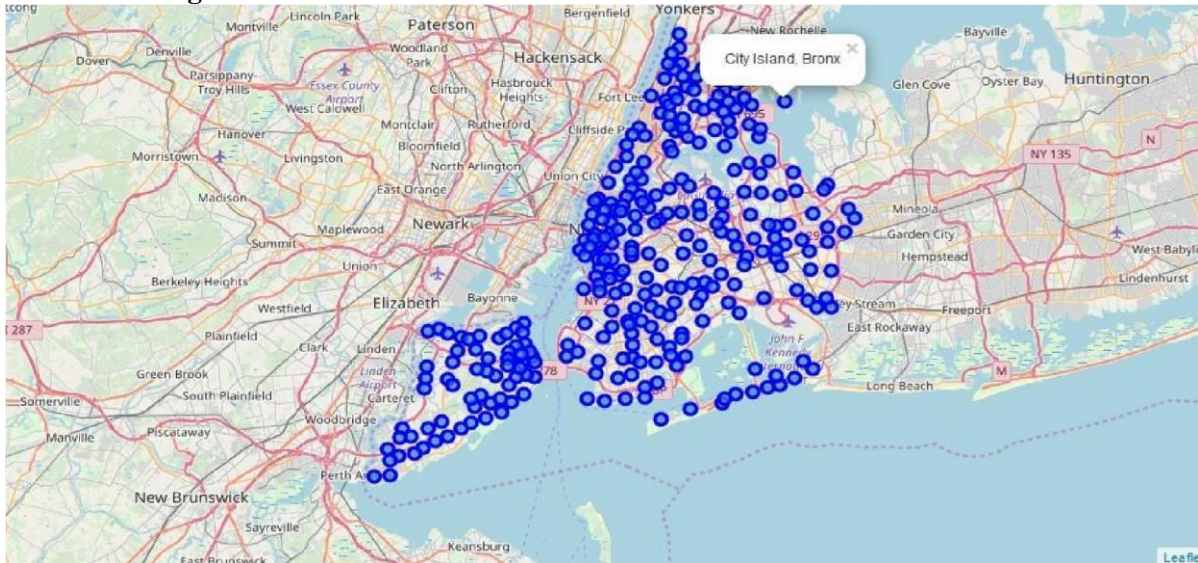

New York city neighbourhood has a total of 5 boroughs and 306 Neighbourhoods. In this project first part is clustering of Manhattan and Brooklyn . And second part is clustering of Bronx, Queens and Staten Island. This is done because of the following Exploratory data analysis.

## Exploratory Data Analysis :

### Data 1- New york city Geographical Coordinates Data.

1. In this we load the data and explore data from **New York \_data.json** file.
2. Transform the data of nested python dictionaries into a pandas dataframe.
3. This dataframe contains the geographical coordinates of New York city Neighbourhoods.
4. This data will be used to get Venues data from Foursquare.
5. We used geopy and folium libraries to create a map of New York city with Neighbourhoods superimposed on top.

### New York neighbourhood visualization

**Data 2-** Second data which is used is the DOHMH Farmers Markets and Food Boxes dataset. In this we will be using the data of Farmers Markets data.

There are totally 144 Farmers Markets in New York city. Highest number are in Manhattan and Brooklyn.

And lowest in Queens, Bronx and Staten Island.

The proof of this is as given below.

We used geopy and folium libraries to create a map to visualise farmers markets of New York city.

### Farmers Market visualisation-New York City

**Data 3 :** To analyze New York city Population, Demographics and Cuisine , scrapped the data from Wikipedia pages given above in the data section. We used BeautifulSoup python library. BeautifulSoup is a Python package for parsing HTML and XML documents (including having malformed markup, i.e. non-closed tags, so named after tag soup). It creates a parse tree for parsed pages that can be used to extract data from HTML, which is useful for web scraping

#### 1.New York Population : Insights from the data :

- ☐ Manhattan (New York County) is the geographically smallest and most densely populated borough.
- ☐ Manhattan's (New York County's) population density of 72,033 people per square mile (27,812/km<sup>2</sup>) in 2015 makes it the highest of any county in the United States and higher than the density of any individual American city.
- ☐ Brooklyn (Kings County), on the western tip of Long Island, is the city's most populous borough.
- ☐ Queens (Queens County), on Long Island north and east of Brooklyn, is geographically the largest borough.

	Borough	County	Estimate_2017	square_miles	square_km	persons_sq_mi	persons_sq_km
0	Manhattan	New York	1,664,727	22.83	59.13	72,033	27,826
1	The Bronx	Bronx	1,471,160	42.10	109.04	34,653	13,231
2	Brooklyn	Kings	2,648,771	70.82	183.42	37,137	14,649
3	Queens	Queens	2,358,582	108.53	281.09	21,460	8,354
4	Staten Island	Richmond	479,458	58.37	151.18	8,112	3,132
5		City of New York	8,622,698	302.64	783.83	28,188	10,947
6		State of New York	19,849,399	47,214	122,284	416.4	159

**2.New York City Demographics :** New York City is the most populous city in the United States,<sup>[9]</sup> with an estimated record high of 8,622,698 residents as of 2017,<sup>[7]</sup> incorporating more immigration into the city than outmigration since the 2010 United States Census.

The racial composition is as given below. This is the reason New York city has restaurants serving cuisine from many countries such as Indian, African, Japan etc. This also increases the scope for restaurants business in New York City.

	Racialcomposition	2010	1990	1970	1940
0	White	44.0%	52.3%	76.6%	93.6%
1	—Non-Hispanic	33.3%	43.2%	62.9%	92.0%
2	Black or African American	25.5%	28.7%	21.1%	6.1%
3	Hispanic or Latino (of any race)	28.6%	24.4%	16.2%	1.6%
4	Asian	12.7%	7.0%	1.2%	–

**3.Cuisine of New York city :** This data has been manually prepared. Data is taken from Wikipedia page - [https://en.wikipedia.org/wiki/Cuisine\\_of\\_New\\_York\\_City](https://en.wikipedia.org/wiki/Cuisine_of_New_York_City) . Using this data we did word cloud.

**NEW YORK CITY CUISINE :** Most Preferred Food in New York City –Italian, Purto Rican, Mexican, Jewish, Indian, Pakistani & Dominican.

**BROOKLYN CUISINE** -Most Preferred Food in Brooklyn is –Italian, Purto Rican & Mexican

**MANHATTAN CUISINE** - Most Preferred Food in Manhattan is – Italian, American, Puerto Rican and Indian.

**QUEENS CUISINE** - Most Preferred Food in Queens is – Indian, Irish, Pakistani and Mexican.

**THE BRONX CUISINE** - Most Preferred Food in The Bronx is – Italian,Puerto Rican, Albanian and Dominican.

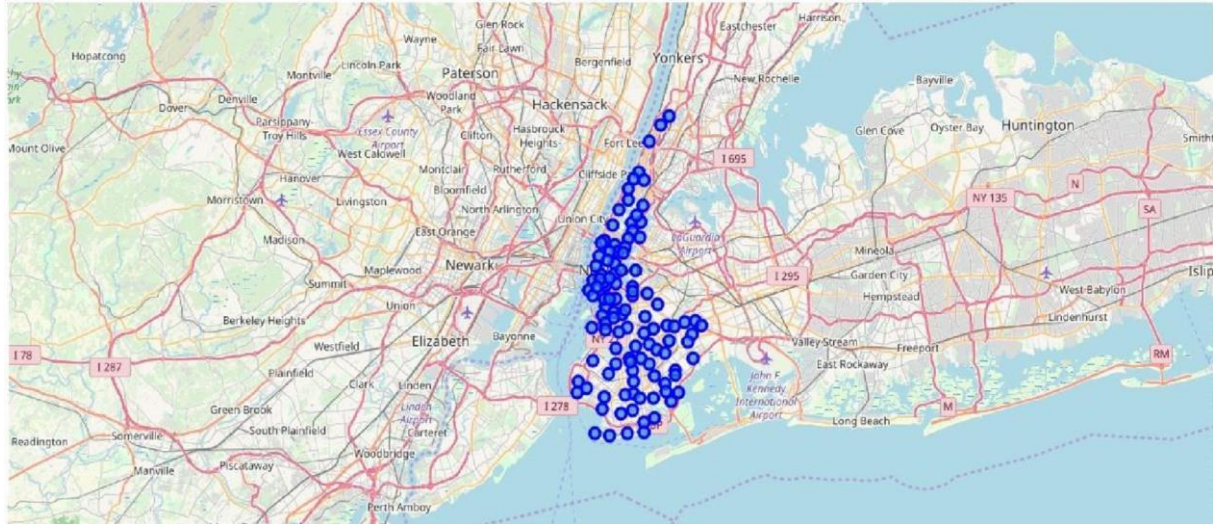

There is very less data of cuisine relating to Staten Island. So could not develop word cloud with it.

**Data 4 :** New York city geographical coordinates data has be utilized as input for the Foursquare API, that has been leveraged to provision venues information for each Neighbourhood. We used the Foursquare API data to explore Neighbourhoods in New York City.

**Brooklyn and Manhattan :**

**Brooklyn and Manhattan Visualization :**

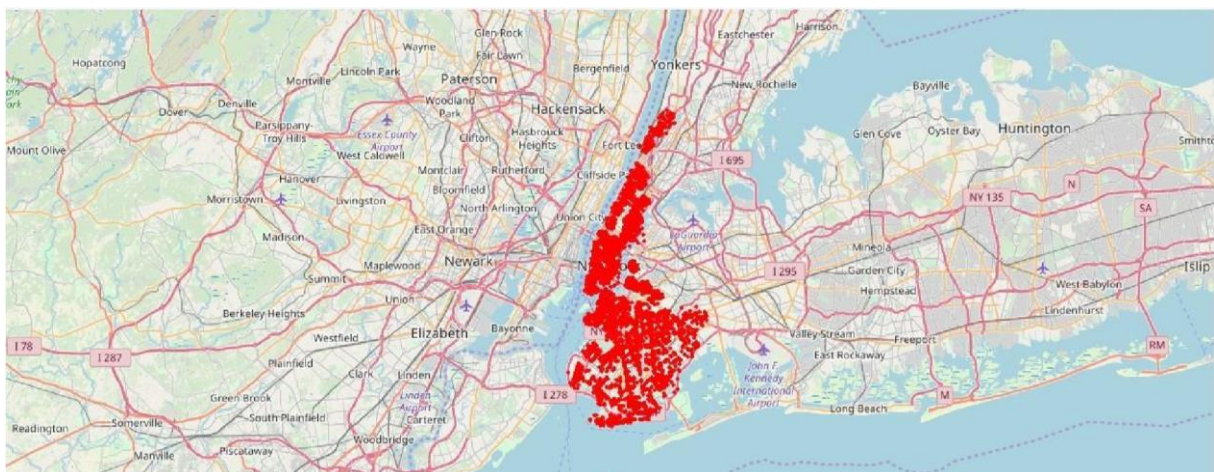

Using the geographical coordinates of each neighbourhood foursquare API calls are made to get top 200 venues in a radius of 1000 meters. The venues data is as given below :

**Brooklyn and Manhattan Venues :**

	Neighborhood	NeighborhoodLatitude	NeighborhoodLongitude	Venue	VenueLatitude	VenueLongitude	VenueCategory
0	Marble Hill	40.876551	-73.91066	Arturo's	40.874412	-73.910271	Pizza Place
1	Marble Hill	40.876551	-73.91066	Bikram Yoga	40.876844	-73.906204	Yoga Studio
2	Marble Hill	40.876551	-73.91066	Tibbett Diner	40.880404	-73.908937	Diner
3	Marble Hill	40.876551	-73.91066	Sam's Pizza	40.879435	-73.905859	Pizza Place
4	Marble Hill	40.876551	-73.91066	Loeser's Delicatessen	40.879242	-73.905471	Sandwich Place

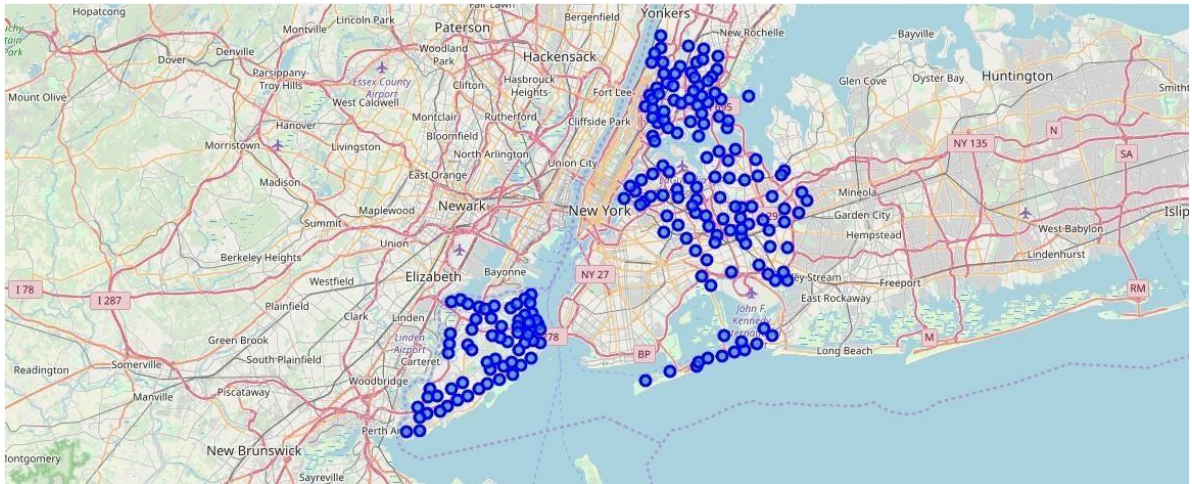

**Brooklyn and Manhattan Venues Visualization :** Generated the below Brooklyn and Manhattan Venues Visualization. The "BM\_venues" dataframe has 9708 venues and 397 unique venue types.

## Bronx, Queens and Staten Island :

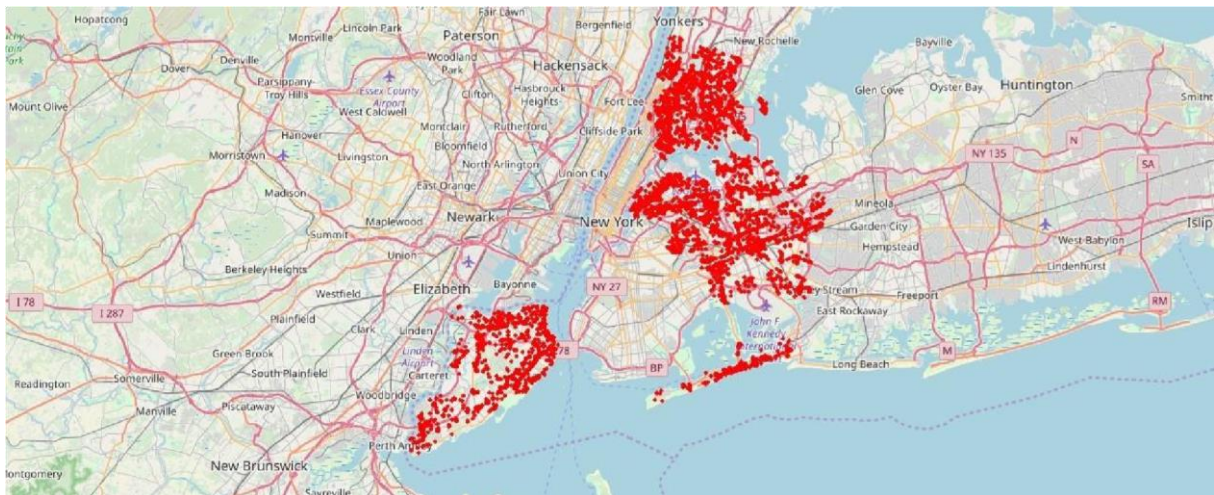

### Bronx, Queens and Staten Island Neighbourhoods Visualization :

**Bronx, Queens and Staten Island Venues Visualization :** The "BQS\_venues" dataframe has 10805 venues and 387 unique venue types.

	Neighborhood	NeighborhoodLatitude	NeighborhoodLongitude	Venue	VenueLatitude	VenueLongitude	VenueCategory
0	Wakefield	40.894705	-73.847201	Lollipops Gelato	40.894123	-73.845892	Dessert Shop
1	Wakefield	40.894705	-73.847201	Ripe Kitchen & Bar	40.898152	-73.838875	Caribbean Restaurant
2	Wakefield	40.894705	-73.847201	Jackie's West Indian Bakery	40.889283	-73.843310	Caribbean Restaurant
3	Wakefield	40.894705	-73.847201	Ali's Roti Shop	40.894036	-73.856935	Caribbean Restaurant
4	Wakefield	40.894705	-73.847201	Rite Aid	40.896521	-73.844680	Pharmacy

### Bronx, Queens and Staten Island Venues Map Visualization :

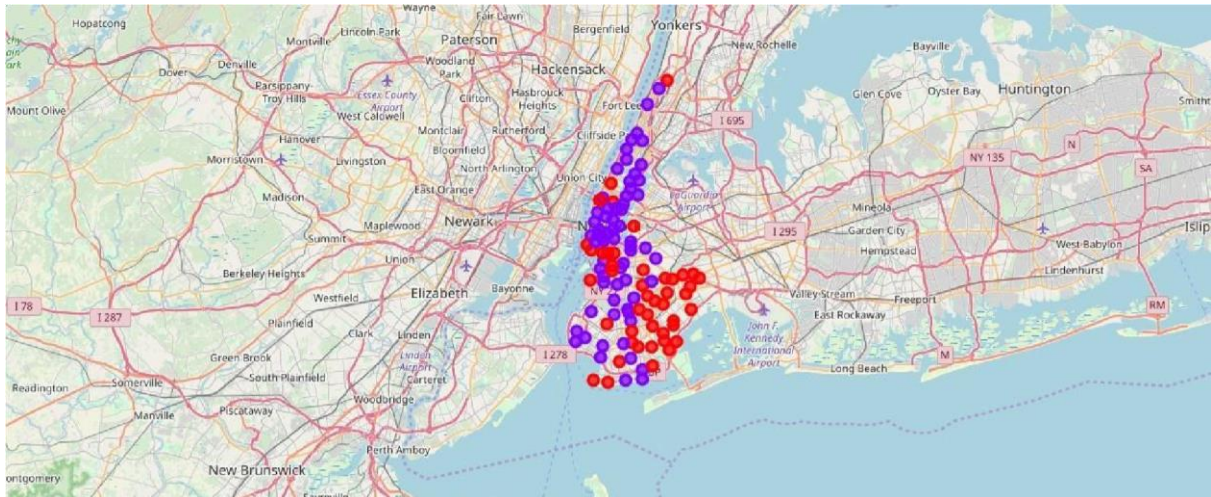

## 4. RESULTS :

From this venues data we filtered and used only the restaurant data for Brooklyn & Manhattan clustering and Bronx, Queens and Staten Island clustering. As we focussed only on restaurants business.

To cluster the Neighbourhoods into two clusters we used the K-Means clustering Algorithm. *k*means clustering aims to partition  $n$  observations into  $k$  clusters in which each observation belongs to the cluster with the nearest mean. It uses iterative refinement approach.

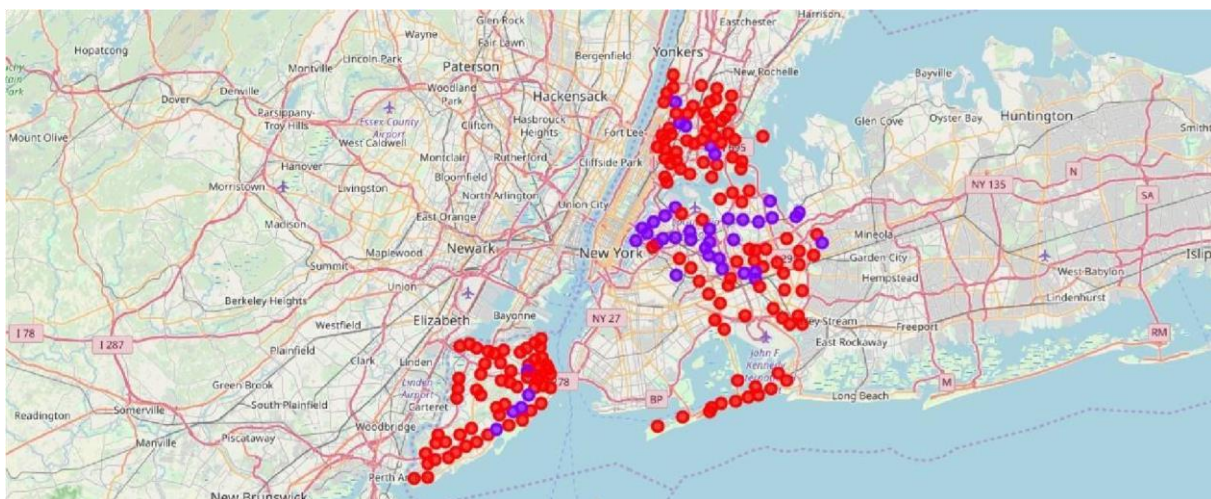

In the below Map Visualization, we can see the different types of clusters created by using K-Means for Brooklyn & Manhattan.

**Cluster1 :** The Total and Total Sum of cluster1 has highest value. It shows that the markets are saturated. Number of restaurants are very high.

### Bronx, Queens and Staten Island :

In the below Map Visualization, we can see the different types of clusters created by using K-Means for Bronx, Queens and Staten Island.

**Cluster0 :** The Total and Total Sum of cluster0 has smallest value. It shows that the market is not saturated. There are untapped Neighbourhoods. List is as given below.

	Borough	Neighborhood	Latitude	Longitude	Total	Cluster_Labels
0	Staten Island	Todt Hill	40.597069	-74.111329	0	0
1	Staten Island	Port Ivory	40.639683	-74.174645	0	0
2	Staten Island	Bloomfield	40.605779	-74.187256	0	0

**Cluster1 :** The Total and Total Sum of cluster1 has highest value. It shows that the markets are saturated. Number of restaurants are very high.

## 5. DISCUSSION:

1. There is scope to increase Farmers markets in Bronx, Queens and Staten Island.
2. There is scope to explore cuisines of various countries in Bronx, Queens and Staten Island.
3. In Manhattan and Brooklyn restaurants of cuisines of many countries are available. So if risk can be taken with great menu on board. It also shows people love eating cuisines of various countries.

## 6. CONCLUSION:

This analysis is performed on limited data. This may be right or may be wrong. But if good amount of data is available there is scope to come up with better results. If there are lot of restaurants probably there is lot of demand. Brooklyn and Manhattan has high concentration of restaurant business. Very competitive market. Bronx, Queens and Staten Island also has good number of restaurants but not as many as required. So this can be explored.

As per the neighbourhood or restaurant type mentioned like Indian Restaurant analysis can be checked. A venue with lowest risk and competition can be identified.
